

Hardware or software-based OTP generation providing strong two-factor authentication.

Ease-of-use, reliability, and scalability in a turnkey authentication system.

AuthentiQate Unified Strong Authentication Platform

AuthentiQate is the industry's most complete multi-tenant and feature-rich secure access system supporting OATH standards. Using strong two-factor authentication techniques, AuthentiQate overcomes the weaknesses of standard user-id and static passwords and works with virtually any web or host application.

With threats increasing daily, the system supports a wide range of hard and soft tokens and includes a comprehensive set of administration, management, and reporting tools to help today's business leaders achieve security and compliance.

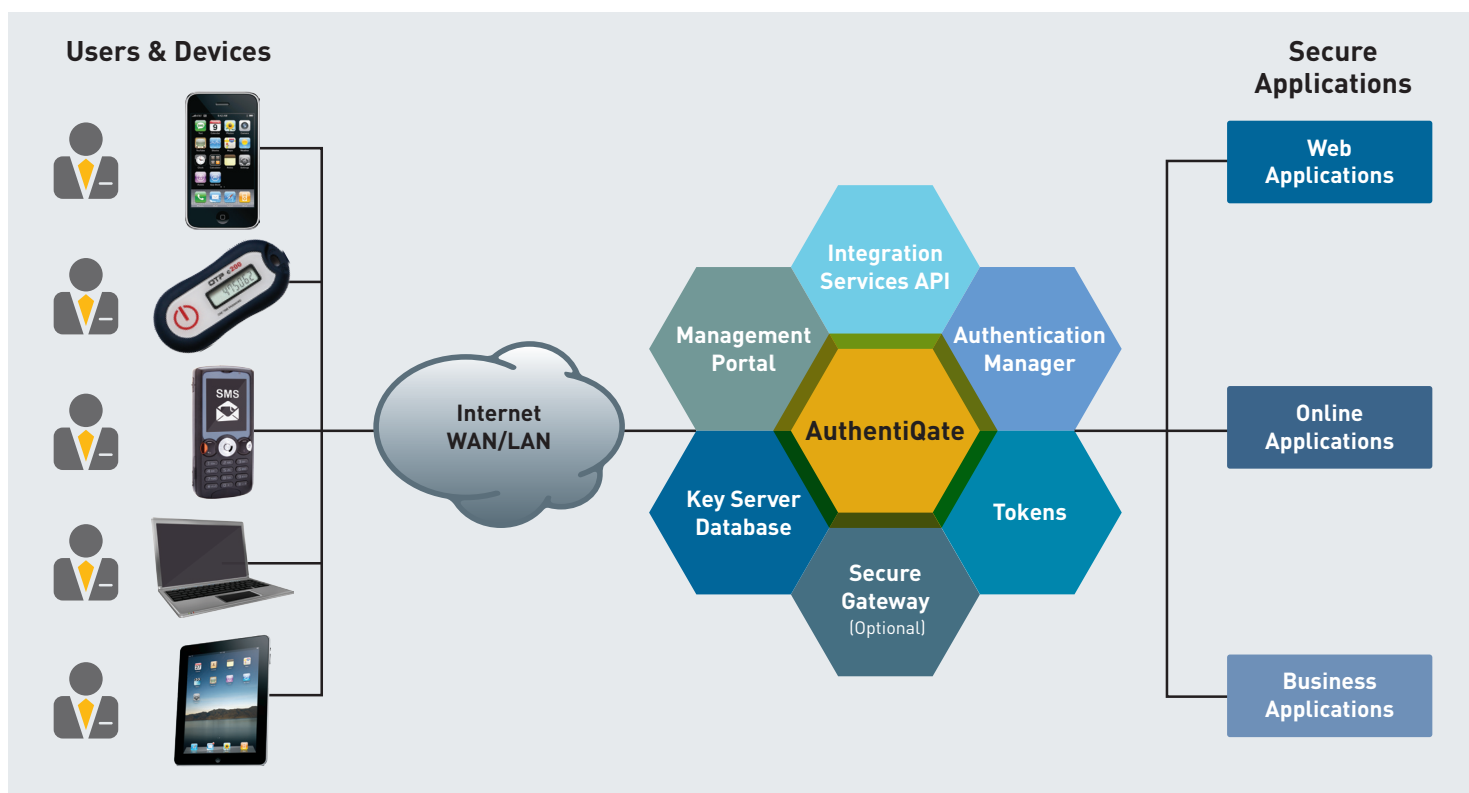

Capabilities

- + Strong two-factor authentication Modular design for flexible deployments
- + Powerful management and administration features
- + Works with hard or soft tokens, including smartphones, OTP dongles, mobile and SMS phones, and laptops
- + Auto and self-registration for simplified administration
- + Integrates with customer applications using RADIUS, Secure Web Services and HTTPS Servlets

Benefits

- + Dramatically strengthened customer application security
- + Highly scalable and redundant system architecture with 99.9% availability
- + Cost effective with low total cost of ownership
- + Integrates with virtually any application and host platform
- + Simplified staffing and reduces management costs
- + Improved compliance
- + Expandable and future-proof

AuthentiQate System Architecture

Specifications

+ Key Features

- New passcode generated every 60 seconds; cannot be guessed or predicted
- Customer web Portal with usage tracking, administration, alerts, and reporting
- Works on any iPhone, iPad, BlackBerry, Windows ME, Java-enabled or SMS phone
- Supports multiple applications
- Built-in security correlation engine

+ System Components

- Client-side soft or hard tokens
- Management Portal
- Authentication Manager
- Authentication Key Server Database
- Integration Services
- Secure Gateway (optional)

+ Core Capabilities

- Supports an unlimited number of remote clients
- Generates alarms based on repeated failed login attempts and other proprietary security algorithms
- Self service web portal for new users and PIN resets
- Works with VPNs
- Local redundancy and load balancing for reliability

+ AuthentiQate is available as a:

- Hardware appliance
- Software installation
- VMware virtual machine
- SaaS offering

+ Integration Services

- Web Services: XML data over SSL is exchanged with application using SOAP standards
- RADIUS compatible
- Supports custom or legacy web portals and applications using simple Servlet requests

+ Managed Authentication Reports

- Timeframe selection
- Top users list
- Top application list
- Geographic area
- Accepted, failed, and distress logins

About Secure-IQ

Secure-IQ is a leading global provider of network security solutions. Built to perform reliably on a 24x7x365 basis, our products and services are used in some of the world's largest carrier networks, including AT&T, BT, and Tata Communications. Our pioneering technology and streamlined workflow processes help companies save money through improved operational efficiency and reduced staff levels. The high performance and intelligence built into all of our products is the end result of our many decades of collective network security experience. It is your assurance of our unwavering commitment to quality, innovation, and customer satisfaction.
